

About Update field details in a SharePoint list

Automatically updates one or several fields in a shared list on Microsoft Sharepoint.

Additional Files for Download

None

How to Configure

1. In studio, inside your process drag and drop microbot activity from the process components in flowchart, and then select the imported microbot.
2. Click Settings, and then click Input/Output Parameter Mapping for the respective microbot.
3. Configure the input/output parameters by creating the arguments in automation studio with respect to the parameters as mentioned below.

KEY	Direction	Description	Sample Value
SPListName	Input	SharePoint file name should be provided as input.	"DemoList"
SPFieldName	Input	SharePoint field XML names with comma separated values. If it is single field, provide without comma.	"Abcfield"
SPItemId	Input	SharePoint list item ID for unique row update	"demoid"
SPUpdateFieldValues	Input	Updated value	"Abcfieldvalue"
UserName	Input	Provide the username for SharePoint site access, along with domain name.	"user@abc.com"
Password	Input	Provide the password for SharePoint site access.	"password"
SharePointsite	Input	SharePoint site path should be provided in URL form.	"https://sharepoint-site-url"
SharePointVersion	Input	Provide the SharePoint	"Office365"

		site version.	
IsSuccess	Output	Return Value for Skill Execution in Boolean.	“true/false”
ErrDesc	Output	Description for error.	
ErrCode	Output	Error code.	

4. Use the output variable in your subsequent processing.
5. Click save option, then at the top-right, click Test run.
6. Upon successful test, the skill is ready to run application.

Error Code

- 100 – System Define Exception.
- 101 – SharePointSiteName is empty.
- 102 – SharePoint Version is empty.
- 103 – List Name is empty.
- 104 – List Field is empty.
- 105 – List Item ID is empty.
- 106 – List Item Field Value is empty.
- 107 – Username is empty.
