

About Validate user via Active Directory(AD)

Verifies user credentials against Active Directory data store for successful authentication.

Additional Files for Download

None

How to Configure

1. In studio, inside your process drag and drop microbot activity from the process components in flowchart, and then select the imported microbot.
2. Click Settings, and then click Input/Output Parameter Mapping for the respective microbot.
3. Configure the input/output parameters by creating the arguments in automation studio with respect to the parameters as mentioned below.

KEY	Direction	Description	Sample Value
UserId	Input	User Id of the user.	"Inbox"
Domain	Input	Domain in which the skill has to check	"Deleted Items"
Password	Input	Password of the user	"user@abc.com"
IsValid	Output	Return Value for Skill Execution in Boolean.	"true/false"
ErrDesc	Output	Description for error.	
ErrCode	Output	Error code in case of any error.	

4. Use the output variable in your subsequent processing.
5. Click save option, then at the top-right, click Test run.
6. Upon successful test, the skill is ready to run application.

Error Code

- 100 – System Define Exception.
- 101 - Username or Password is incorrect.
- 102 - Please provide username and password
- 103 - Please provide domain name.
